

# TASK-MANAGER

POS Management Software

Task-Manager is a suite of Software Modules that manages the back office functions and links the Quest Point of Sale Terminals together to create a total POS solution with export options to General Ledger, Creditors and Payroll packages.

The product is divided up into modules, allowing the purchase of tailor-made packages just right for your requirements without having to pay for things that you may not use. New modules can be added as required if your needs change.

Task-Manager provides tight control over Inventory Management, Cash Management and Staff Costs. It can help detect problems such as theft and wastage before they get out of hand. You know exactly what your Inventory-on-hand is, up until the last sale, with the real time processing of sales transactions.

Keep track of staff time and attendance with the clock-in and clock-out facility and export the information to your rostering or payroll software. The system enables the highlighting of absenteeism, attendances and late arrivals for quick verification.

In a world where competitive pricing has lost much of its lustre, many Venues have turned their focus to customer retention, loyalty and rewards. Using the raft of features available in the Task-Manager Membership & Loyalty/ CRM software module that are totally integrated with the Quest POS Terminals, there is no double handling of transactions and it is done with a minimum amount of effort and can return excellent results.

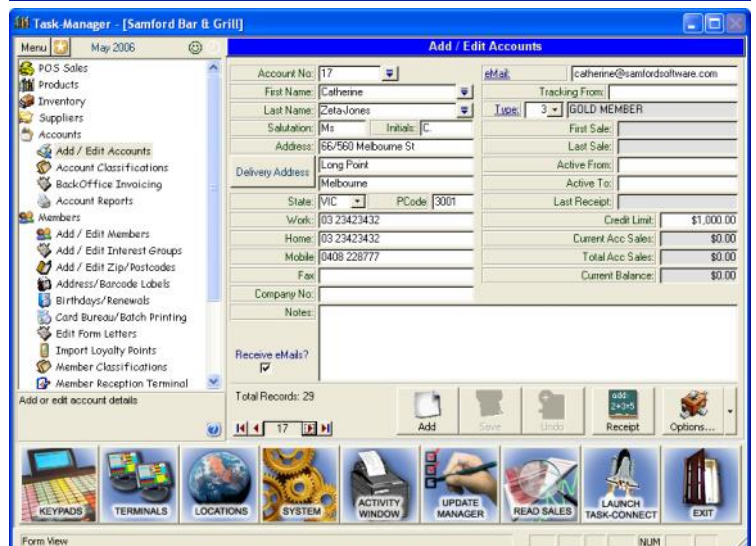

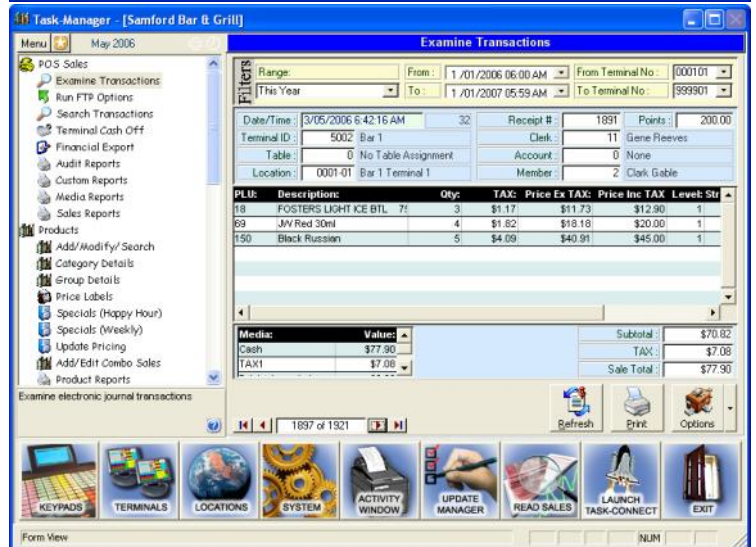

Overall, Task-Manager provides comprehensive management of inventory, membership, loyalty and financial control of the venue. The total system can be centrally managed from one host PC in the back office.

While the Quest POS Terminals will run standalone with no central point of failure, some advanced features which draw information from the Host PC can be utilised with all the benefits of an on-line POS system. These include integration with Poker Machine Loyalty Systems and Property Management systems that are provided by the Task-Manager suite of products.
